

# 18F1B- LINEAR LOW-DENSITY POLYETHYLENE RESIN

Shell Polymers 18F1B is a 1-butene LLDPE blown film resin.

#### **Product Family**

**LLDPE** 

Film Extrusion

# **Highlights**

- Produces films that have good
- drawdown, tensile and toughness
- Gas phase technology

#### **Additives**

Thermal stabilizer

## **Technical Expertise**

From analytical chemists to polymer scientists and technical experts, our innovation center is home to industry pioneers who can collaborate with you to move your business forward.

#### **Strategic Transportation Options**

As a customer benefit, we have multiple transportation options when you need them—with the ability to move from rail to truck. In fact, our rapid deployment truck loading operation enables trucks to be loaded in 20 minutes and prepared for shipment in a couple hours directly from our site.

# State-of-the-Art Film Equipment

Our application hall has three commercial-scale Alpine film extrusion lines that are used to make specimens and parts similar to our customers'—which means you can avoid downtime by using our lines to conduct back-to-back trials.

## **Product Details**

Melt Index	Method	Test Conditions
1.0	ASTM D1238 (g/10min)	2.16 kg/190C

Density	Method
0.918	ASTM D792 (g/cm3)
